

## Lilleshall House.

### LOT 2—*continued.*

TELEPHONES.—The Hall is in connection with the Post Office Trunk Service, and there is a system of inter-communicating telephones in the House, to which the principal Lodges and Estate buildings are also connected.

#### BELLS—ON CRANK SYSTEM THROUGHOUT.

Directly adjacent to the main block of the House, and with access therefrom, is

THE SWIMMING BATH (17ft. × 12ft.) and varying from 5ft. 6in. to 6ft. 6in. in depth; built and lined throughout with white glazed bricks. Lighted from lantern roof. Supplied with either cold water from Waterworks or with hot water from independent boiler. Dressing landing.

Also

WINTER GARDEN AND ORANGERY—a lofty structure, stone and glass built—adjacent to the West Terrace, from which access is obtained by flights of stone steps to flagged roof—with balustrade and parapet—to this building.

WATER SUPPLIES.—The main water supply is derived from the Hilton Waterworks, situate on the Lilleshall Estate, with the rising main of which the Hall is connected by a separate 6in. main.

There is also a supply by gravitation from a storage reservoir situate at Red Hill.

This water is of excellent potable quality.

An alternative supply is derived from a spring situate near Lilleshall Abbey, and which is at present being forced by three rams into tanks in the house, while the overflow is conveyed into a storage reservoir situate in the Park.

This is good water, though rather hard.

There are two other reservoirs in the Park, the water from which is used in stable yard and for gardening purposes.

FIRE PREVENTION AND ESCAPES.—Fire hydrants completely surround the house, and are in connection with the water main, which ensures sufficient pressure to enable the throwing of jet of water to the roof of the house. On all the floors in the centre of the main block there are fire plugs connected with same supply; with fitments for hose attachments.

Also outside fire escapes.

Close to the residence, and immediately adjacent to the stabling, is—

THE GATE HOUSE—built in the same style and of the same materials as the Mansion, surmounted by a bell turret and vane, and having double oak doors 12ft. high. The structure contains, on the right,

THE PORTER'S LODGE, with Living Room, Bedroom, Scullery, Pantry and W.C.; and on the left,

THE COACHMAN'S LODGE, with Kitchen, Parlour, two Bedrooms, Scullery and W.C.

### THE STABLE YARD

comprises the following accommodation:—

Laundry, with three Porcelain Wash Trays (h. and c.) and two Coppers, Mangle Room, Ironing Room, and W.C. for maids; Garage for six cars (with pit), five Loose Boxes, Fire Engine House, Coach House for two carriages, Motormen's Mess Room and Pantry, Saddle Room No. 1, four-stall Stable, Corn Store, six-stall Stable, Saddle Room No. 2, Garage for three cars. Above the foregoing there are fourteen cubicle Bedrooms for men, Brushing Room, Sitting Room and Bath Room.

Excellent lofting over part of stables.

Dormitory and Garages are heated by hot water pipes and radiators supplied from independent boiler, which also supplies Bath Room.

In the centre of the yard is a drinking fountain for horses.

IN THE BACK STABLE YARD there are House Carpenter's Shop, Club Room and Institute for servants and workmen, Petrol Store and two W.C.'s.

Outside the main stable yard are Drying Ground and Ice Pit.
